

## Confidence and advantages

Metalor Dental Refining specialises in assaying and refining precious metals of primary and secondary origin.

The rising amount of precious metals that are entrusted to Metalor Dental Refining each year confirms that the demand for a transparent recycling service is increasing. You will find in us a competent partner in whom you can trust. Metalor Dental uses the official precious metal prices on the day of analysis for the valuation of the precious metals. The credits for gold, platinum, palladium and silver are valued accurately to 1/100g.

We are flexible to fulfil your recycling requirements. The most important fact is that there are no hidden recycling margins, and the account is completely transparent.

## The refining plant

More than 500 tons of material are processed each year in the Metalor Technologies refining plant in Marin near Neuchâtel (Switzerland). Gold, silver, platinum and palladium are recovered for our customers.

A team of sworn precious metal examiners in Switzerland control on site the amount and quality of the precious metals. This guarantees that the valuation is performed according to the strict directives for the analysis of precious metals. The refining plant also fulfils the environmental standard ISO 14001.

## Our processing times

- > For meltable waste such as old crowns, bridges, casting material remnants, etc., 12 working days after receipt in Switzerland.
- > For combustible waste such as scrap in extraction bags, etc., 8 weeks after receipt in Switzerland.

## About Metalor Dental
